

Effective Jan. 1, 2015, certain drugs under the Humana Medicare formularies will have new limitations or will require utilization management for the 2015 plan year. These changes could mean higher costs or new requirements for Humana members who use these drugs. Humana encourages the use of generic and cost-effective brand medications whenever possible.

High-risk medications (HRM) have the potential to be problematic in those 65 years of age or older. Below is a list of some commonly used HRMs that have Humana Medicare formulary limitations or utilization management edits in 2015 (e.g., prior authorization (PA) requirements, step therapy (ST) modifications and nonformulary (NF) changes). Humana members are asked to talk to their health care provider about possible alternatives.

Impacted drug	2015 HRM National - 5 Enhanced PDP Formulary Formulary ID: 15084	
	Drug impact: (Utilization edits/ Noncovered/Tier changes)	Possible alternative
estradiol	Tier change	Please consult with your doctor
