

Improving Continuity of Care with Telemedicine

Telemedicine visits provide a convenient and flexible way for your patients to have access to 24/7 care. Telemedicine provides innovative care to your Humana Healthy Horizons™ in Florida patients by allowing you to evaluate, diagnose or treat them remotely via phone or video visit.

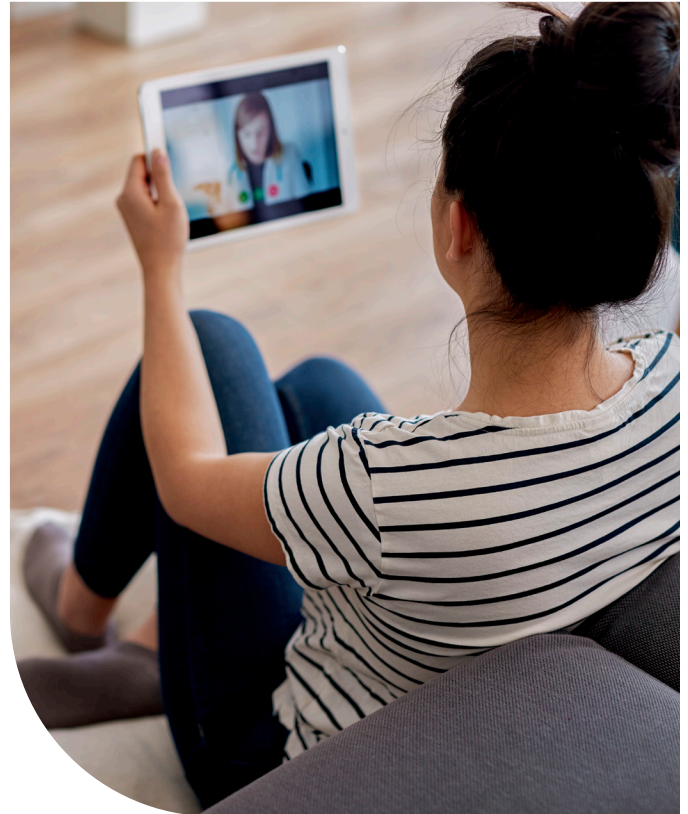

Utilizing telemedicine technologies can:

- Improve care transitions
- Improve continuity of care
- Reduce readmissions

Improving virtual access to care after an emergency room visit or hospital discharge lets you:

- Improve early identification of adverse events
- Reinforce education
- Reduce risk of polypharmacy
- Review treatment plans

Patients have the benefit of expanded access to convenient appointment scheduling without the need to travel or miss work. Utilizing telemedicine to support access and continuity of care can improve patient outcomes.

For additional details on telemedicine services, or if you are considering offering these services, please see our [What Physicians Need to Know about Telemedicine flyer](#) or visit [Humana.com/FLEducation](https://www.humana.com/FLEducation).
